## Laboratory Clear Tygon PVC Tubing

- Tygon Formulation: E-3603
- Very flexible
- Soft (Shore A56)
- Temperature Range: -25° to 165° F
- Use with [barbed fittings](#)

A super-smooth interior resists build-up, making this tubing easy to clean. It is also softer than other PVC tubing, so it works well with peristaltic (squeeze-action) pumps. Use with water, air, food and beverage, and ethylene glycol. Tubing is made from FDA-compliant resins. It can be sterilized with steam (autoclaving) and gas.
