

Product Discontinuation

Date: April 18, 2007
Announcing: Product Discontinuation Notice
From: Building Efficiencies Program Office
Released To: System Services Americas (SSA)

Advance Notification: Discontinuation of York® ISN Advantage™ and ISN ConneXsys™ Products

In December 2005, Johnson Controls announced that it would phase out the York® ISN product line by March 31, 2006. York ISN products remained available for projects that were currently being installed and could not be converted to the Metasys® system.

Effective July 9, 2007, we are discontinuing all ISN Advantage and ConneXsys Building Automation System (BAS) products and will no longer accept orders for new products.

For all customers who have purchased or installed a York ISN control system, ISN repair and replacement parts will be available to order by the preceding date using the current York Baltimore Parts Center and Johnson Controls® Product Sales ordering processes.

The Johnson Controls repair center now offers repair service on ISN Advantage and ConneXsys products. Repair and return instructions and additional contact information are available on the repair center intranet site. Repair prices for the individual part numbers will soon be available on this site as well. The site is as follows:

http://publish.cg.na.jci.com:9085/publish/controls/us/eng/repair_center/h/Repair_Center_Home_page.html

Integration of the ISN systems into the Metasys system is available through the System Integration Services (SIS) organization. The integration allows the user to read and command all ISN Input/Output (I/O) point data and key operational data through Metasys software applications and browser User Interface (UI). To request pricing information, go to:

http://siscms.cg.na.jci.com/base/SIS_base.htm.

Sincerely,

Robert Plouffe
