Equipment Affected: All YIA/YPC Absorption Chillers

Mercury Manometers No Longer Available

General

Because of increasing safety and environmental concerns, the mercury U-tube manometer (p/n 026 09261 000) is no longer available. The mercury type U-tube manometer was shipped loose with all new absorption chillers for field installation. The manometer manufacturer has discontinued production of mercury type manometers.

In place of the mercury U-tube manometer, York will supply a non-mercury, dial type, absolute pressure gauge (p/n 026 32396 000). This device has an operating range from 0 to 40 mm Hg Absolute, which will meet the unit's operational needs. York has used this device for years in non-mercury manometer type applications.

The new pressure gauge will be included with the chiller's ship loose parts for field installation.
