ANALYSTS, INC.

Oil and refrigerant analysis services furnish diagnostic evaluations and maintenance solutions for mechanical systems and equipment.

An independent analytical testing organization, **Analysts operates five regional laboratories in the U.S.**, plus, two international labs in Japan and Mexico. Together they provide the highest quality and services available in oil and fluids analysis.

Analysts, Inc. is **the only multi-lab** oil and fluids analysis organization to have its Quality Assurance program—for every lab—registered as **ISO-certified**. The company has proven its commitment to service and analytical quality through the official audit process, approval, and certified registration of the ISO 9001 classification.

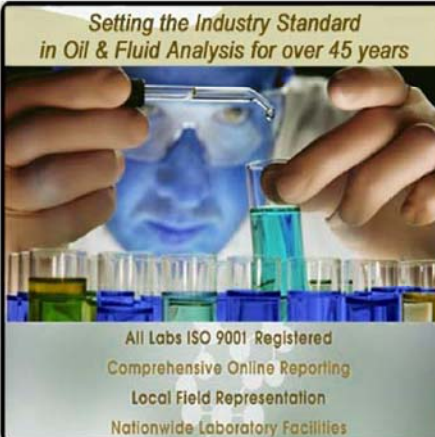

Analysts' refrigeration analysis programs can give you the security of knowing that the condition of your equipment—or the equipment you service—is within safe operating ranges. It also verifies that lubrication is taking place as specified, allowing effective maintenance scheduling. These services analyze lubricants and refrigerant solutions for reciprocal, centrifugal and screw-type compressor systems, including lithium bromide absorption chillers and those systems powered by natural gas engines.

Analysts OnLine is the most responsive and technically advanced on-line service available in the industry. This easy to use "point & click" system allows you, the user, to select what data—and from what worksite/location or customer—you wish to review. You decide sample severity (critical, abnormal, normal) levels, date ranges and customers and locations. You can also set up your data to be emailed daily in a LOAMS file or you can elect to download your LOAMS data live, directly from the website.

Analysts was **the first oil analysis laboratory to computerize its production operations through a Laboratory Information Management System (LIMS)**, the first lab with customer desk top computer software for managing programs, and is a leader in delivering oil analysis information via the internet.

Analysts is the only oil analysis laboratory to develop and hold patents in testing instrumentation as well as sampling accessories. The Company has been issued patents on: the Bellows® sample container, an automatic viscosity system, and most recently on the state-of-the-art fuel soot measurement instrument, LEM®.
