

YORK® Enhancement Products

OptiView™ Control Center Retrofit for Non-YORK Chillers

The benefits are plain to see

Easier Integration with BAS

Multiprotocol support for direct connection to popular BAS platforms, including YORK ISN, BACnet and Metasys®.

Trending and History

Diagnosing problems is easy with graphical trending and historical reports—giving you the ability to pinpoint faults and anticipate problems before they occur.

Enhanced system operation

OptiView's powerful capabilities and graphical interface enable better chiller control for efficient and stable operation, resulting in reduced wear and tear of components and greater long-term reliability.

YORK: The clear leader in chiller controls

YORK advances chiller control with a graphical user interface that's intuitive and simple to read. Experience shows that with an OptiView panel, plant room operators and maintenance personnel improve their productivity and their control learning curve. Networking is no problem with an OptiView panel.

Transform your chiller's controls with confidence

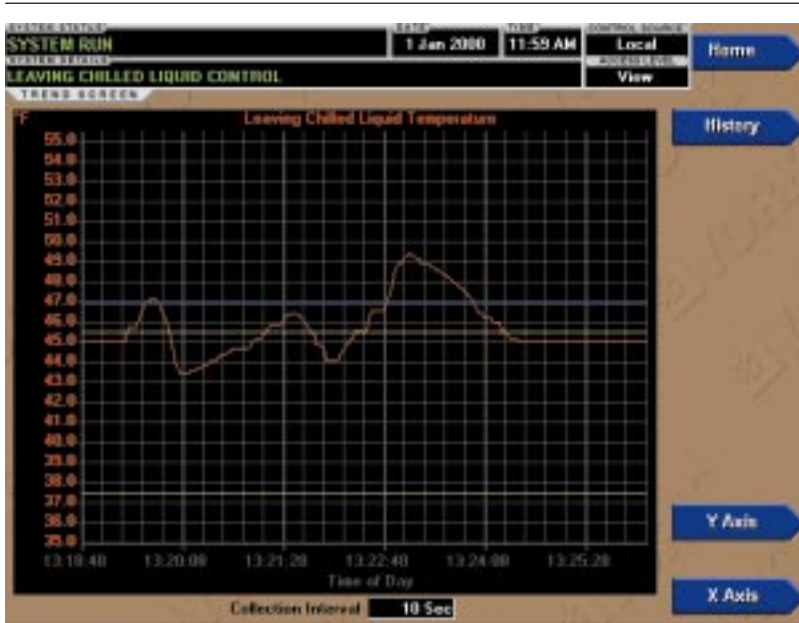

With decades of experience in servicing and repairing all brands of chillers, YORK Factory Service technicians have the expertise and engineering resources to ensure a smooth retrofit with minimal disruption to your facility's operations.

Text vs. graphics: You don't have to compromise!

- Don't settle for a hard-to-read text display when you can get the advantages of the industry's only graphical interface for chiller control.
- Old-style panels require repeated keystrokes on a small, monochrome screen. With an OptiView panel, a single button reveals a wide array of information on a large, full-color display.
- Unlike text-only panels, the OptiView center can show more than 30 full-screen charts and diagrams.
- Full-color illustrations of the appropriate components make beta interpretation simple.

Enhancement Products

OptiView Control Center Retrofit for Non-YORK Chillers

Data you observe vs. information you understand

When new control technology can help simplify chiller operation and detect potential problems, it's worth a second look. That's why YORK offers the OptiView™ Control Center Retrofit for non-YORK Chillers. Instead of pieces of data to observe, OptiView technology provides a complete picture of information that you can use. Real-time data lets operators confidently optimize adjustments, schedule maintenance, and pinpoint potential problems before they cause downtime.

Create trend graphs for over 100 variables

Easy navigation makes it simple to generate customized graphs of up to six different variables on a single screen.

Read important historical data right at the operating point

Operators can easily see what happened and when it happened on the large OptiView display. Operating and fault messages are automatically stored and quickly accessed to simplify operating decisions and to guide troubleshooting.
