Subject: **YR design modification level C Product Release**

****NEW PRODUCT RELEASE ANNOUNCEMENT****

The YORK YR water chiller product line offering solutions for applications 200 tons refrigeration [TR] (700kW) to 460 TR (1530kW) for 60 hz applications or 167TR (585kW) to 363TR (1275kW) for 50 hz applications has been upgraded to the design modification level "C".

Through design enhancements to the compressor, control logic, and piping systems, the product is now more efficient and more reliable without a price increase over the modification level "B" design. The Mod C design also introduces new chiller configurations for 50hz providing more effective sound management and lower shipping heights for container shipments for T2 compressor units.

Benefits:

- Market leading part load [IPLV] efficiency
 - as low as 0.448 and up to 9% improvement to mod B
- Competitive full load efficiency
 - as low as 0.544 kW/ton (50hz) and up to 7% improvement to mod B
- Market leading part load sound for screw chillers
 - as low as 79 dBA part load sound untreated
 - as low as 74 dBA part load sound treated
 - as low as 68 dBA part load with sound curtains

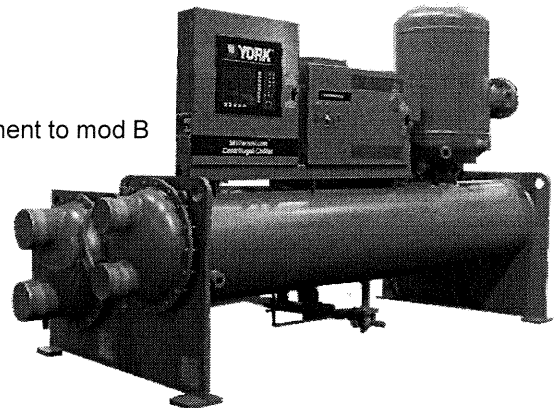

The key design improvement is a streamlined discharge gas flow pattern in the compressor resulting in reduced system losses and more efficient water chilling performance.

Standard Features:

- OptiView Control Center offering ease of use in multiple languages
- Near zero refrigerant leakage design for long term sustainability
- Heat Exchanger optimization flexibility for application matching
- Product customization capabilities to suit the customer application needs
- Variable Orifice refrigerant control for precise refrigerant management

YorkWORKS and WinCool are already equipped with the data for the YR mod C units.

YR mod B orders will be accepted until September 15th (except stock units). Please work to convert open proposals to Mod C level design.

Excellent ***Real World Energy*** Performers to secure new business!!
