

SHARPE[®] VALVES

**SERIES 99
HIGH PERFORMANCE
3 PIECE FULL PORT BALL VALVES**

SHARPE® HIGH PERFORMANCE VALVES

Sharpe® Series 99 Ball Valves offer as standard features, advantages that other valve manufacturers offer only as costly extras. This is the Sharpe® advantage.

STANDARD FEATURES

3-Piece Design

Bottom Entry Live Loaded Stem

High Cycle Stem Packing

Fully Encapsulated Body Seals

Integral Mounting Pad

Lockable Handle

Slotted Seat Design

Choice of Seats and Seals

Variety of End Combinations

Floating Ball Design

Encapsulated Body Bolts

Traceability

ADVANTAGES

In-line serviceable swing-out center section allows easy access to internal valve components without disturbing alignment of pipe. Functions as both valve and union.

Self adjusts with pressure and temperature fluctuations. Blow-out proof anti-static design helps prevent accidents and injuries.

PEEK and Nova* thrust bearings and stem seals extend valve cycle life over conventional ball valves and are the best choice for actuation.

Allows valve ends to be welded in line without disassembly, saving costly labor time. Also prevents seal ruptures in high pressure or steam applications.

Ideal for actuation. Centering lip feature assures precise alignment of bracket, stem and coupler. Actuators may be retrofitted on existing Series 99 without disruption of line integrity. Allows for secondary containment unit to be added when necessary.

All Sharpe® Series 99 Valves meet OSHA standards with locking device. Keeps valves from being opened or closed accidentally.

Relief slots help equalize body pressure, reduce torque and assure leak-tight sealing. Seats also provide a wiping action that cleans ball and seats each time valve is cycled.

A wide variety of seat and seal materials are readily available for the most demanding applications, including Buna, Delrin, Nova*, PEEK, EPDM, Viton®, TFE, RTFE, TFM, Grafoil, and UHMWPE.

A wide choice of optional end connections are available including, but not limited to threaded ends, socket weld ends, butt weld ends, flush bottom tank pads, and flanged ends.

Precision engineered solid stainless steel ball with relief hole in stem slot prevents build up of cavity pressure while valve is in open position. Bi-directional floating ball seats downstream reduce torque and guarantee a bubble-tight shut off.

Heavy duty stainless steel bolting is protected from outside environment assuring valve integrity.

Heat numbers are provided on all valve bodies and ends. CMTR's (certified mill test reports) are available upon request.

* Carbon and Graphite Filled TFE

Due to ongoing development of our product line, specifications subject to change without notice.

1. TFM seats are standard. Other seat materials are readily available.
 2. Delrin and UHMWPE seats should not be used for steam service.
 3. Delrin must not be used in Oxygen applications.
