READ BEFORE PROCEEDING!

GENERAL SAFETY GUIDELINES

This equipment is a relatively complicated apparatus. During installation, operation maintenance or service, individuals may be exposed to certain components or conditions including, but not limited to: refrigerants, materials under pressure, rotating components, and both high and low voltage. Each of these items has the potential, if misused or handled improperly, to cause bodily injury or death. It is the obligation and responsibility of operating/service personnel to identify and recognize these inherent hazards, protect themselves, and proceed safely in completing their tasks. Failure to comply with any of these requirements could result in serious damage to the equipment and the property in

which it is situated, as well as severe personal injury or death to themselves and people at the site.

This document is intended for use by owner-authorized operating/service personnel. It is expected that these individuals possess independent training that will enable them to perform their assigned tasks properly and safely. It is essential that, prior to performing any task on this equipment, this individual shall have read and understood this document and any referenced materials. This individual shall also be familiar with and comply with all applicable governmental standards and regulations pertaining to the task in question.

SAFETY SYMBOLS

The following symbols are used in this document to alert the reader to specific situations:

Indicates a possible hazardous situation which will result in death or serious injury if proper care is not taken.

Identifies a hazard which could lead to damage to the machine, damage to other equipment and/or environmental pollution if proper care is not taken or instructions are not followed.

Indicates a potentially hazardous situation which will result in possible injuries or damage to equipment if proper care is not taken.

Highlights additional information useful to the technician in completing the work being performed properly.

External wiring, unless specified as an optional connection in the manufacturer's product line, is not to be connected inside the control cabinet. Devices such as relays, switches, transducers and controls and any external wiring must not be installed inside the micro panel. All wiring must be in accordance with Johnson Controls' published specifications and must be performed only by a qualified electrician. Johnson Controls will NOT be responsible for damage/problems resulting from improper connections to the controls or application of improper control signals. Failure to follow this warning will void the manufacturer's warranty and cause serious damage to property or personal injury.

CHANGEABILITY OF THIS DOCUMENT

In complying with Johnson Controls' policy for continuous product improvement, the information contained in this document is subject to change without notice. Johnson Controls makes no commitment to update or provide current information automatically to the manual owner. Updated manuals, if applicable, can be obtained by contacting the nearest Johnson Controls Service office.

Operating/service personnel maintain responsibility for the applicability of these documents to the equipment. If there is any question regarding the applicability of

these documents, the technician should verify whether the equipment has been modified and if current literature is available from the owner of the equipment prior to performing any work on the chiller.

CHANGE BARS

Revisions made to this document are indicated with a line along the left or right hand column in the area the revision was made. These revisions are to technical information and any other changes in spelling, grammar or formatting are not included.

Notes:

1. Process per m-166.
2. A. Braze all copper to copper joints per mos 15-2-16 (Item 39)
B. Braze all copper to steel joints per mos 15-2-12 (Item 40)
3. Use dry nitrogen inside tubing and joins for all brazing. Never immerse joint in water for cooling,
4. Add strip gasket along side flanges of front and back V-Panels directly in line with the center of the coil tube before putting coil assemblies in place.
5. Add a double thickness of gasket (Item 19) along entire top edge of top coil face on both coils to prevent air flow.
6. Wrap item 19 all the way around the receiver, up against the V-Panel, to block air flow.
7. Add a double thickness of gasket (Item 19) along entire top edge of top coil face on one coil to prevent air flow.
8. Do not align the pipes with the clamps or bracket. This is to offset the shop tolerance buildup.

To identify replacement part numbers, select panel identifier number from *Table 26* or from the panel identifier label shown on *Figure 13*, then refer to the power panel component. See *Table 28* through *Table 32* and *Figure 14* through *Figure 16*.

DSCN0003

NOTE:

Locate the PANEL NUMBER sticker on the upper right hand corner of the power panel, see Figure 12, then refer to the appropriate parts list for that number.

Notes:

1. See *Figure 14* for component locations.
2. * Make a visual inspection of the contactors in order to select the correct replacement part, refer to *Table 33*.
3. Items 2A and 2B are recommended spare parts.
4. Fans are either Standard or Ultra Quiet (X or L) or High Airflow (G).

Notes:

1. See *Figure 14* for component locations.
2. * Make a visual inspection of the contactors in order to select the correct replacement part, refer to *Table 33*.
3. Items 2A and 2B are recommended spare parts.
4. Fans are either Standard or Ultra Quiet (X or L) or High Airflow (G).

Notes:

1. See *Figure 15* for component locations.
2. * Make a visual inspection of the contactors in order to select the correct replacement part, refer to *Table 33*.
3. Items 2A and 2B are recommended spare parts.
4. Fans are Standards or Ultra Quiet only.

Notes:

1. See *Figure 16* for component locations.
2. * Make a visual inspection of the contactors in order to select the correct replacement part, refer to *Table 13*.
3. Items 1-KC and 1-KF are recommended spare parts.
4. Fans are Standard or Ultra Quiet only.

LD16782

NOTES:

1. Harness should not come in contact with hot piping or compressor housing.
2. Process per M-166
3. Braze all copper to copper joints per MOS-15-2-16 (item 14).
4. Use only dry nitrogen inside tubing and joints for all brazing. Do not immerse joints in water for cooling.
5. Locate and cut discharge line to install tee.
6. When installing hot gas valve, the arrow on the valve must point in direction of expansion valve as shown.
