Lithium Bromide Sample Testing			

It has been noted that some lithium bromide samples are being sent for analysis to laboratories that are not qualified by Johnson Controls.

All Johnson Controls equipment solution samples must be sent to Rocky Research. Johnson Controls has an agreement with Rocky Research to analyze all Advaguard 750 inhibitors. Furthermore, Rocky is the only laboratory that has our specifications and ranges for this inhibitor. Rocky Research can supply all types of make-up inhibitors if so indicated on the submittal form.

Rocky Research can be contacted at:

Rocky Research  
1598 Foothill Drive  
Boulder City, NV 89005  
Phone: (702) 293-0851  
Fax: (702) 293-0854

You can also obtain a solution sample kit either by calling Rocky Research or ordering p/n 028 15065 000 from the Baltimore Parts distribution center, (800) 932-1701. Each kit includes a solution sample instruction and a submittal form. The sample kit box is used to ship the samples. When sending samples, be sure the label is attached to the box and can be easily read.
